Precision Planer Bearings

THE CENTER OF A REVOLUTION

**Elevated Standard**
Every Axis precision planer bearing meets or exceeds ABEC 5 tolerances.

**Honed Raceways**
Raceways are honed for quiet operation and longer life.

**Machined Bronze Retainer**
Every Axis planer bearing comes with a machined bronze retainer, which is stronger with better balance, producing less vibration than a pressed brass retainer. This allows for higher operating speeds and smoother running.

**Reduced Operating Clearance**
The reduced clearance (C2) helps maintain precise rotation.

**Forged Steel Rings**
Both inner and outer rings are forged. The superior grain structure from forging extends fatigue life.
